

Brainstorming and Idea Generation

Date	30 September 2026
Team ID	SWTID-2026-8550
Project Title	AI BlogNest API

1. Brainstorming and Ideation Generation

ContentGen is a secure, modular REST API platform designed to simplify blog creation, content management and AI-assisted writing. It uses Node.js and Express.js, MongoDB with Mongoose and Google Gemini AI.

Brainstormed Areas

- Managing multiple drafts, categories and tags.
- Reducing time spent on approval and comment moderation.
- Handling media metadata consistently.
- Providing permissions for Admin, Editor, Author and Reader.
- Generating blog content with AI.
- Summarizing extensive content.
- Protecting APIs through authentication, authorization and input safeguards.

Idea Generation

Idea	Purpose
Centralized Blog CMS	Manage users, posts, categories and comments.
AI Blog Generator	Generate structured blog content from thematic input.
AI Summarizer	Create concise abstracts from long content.
RBAC	Control actions for Admin, Editor, Author and Reader.
Secure REST API	Provide controlled GET, POST, PUT and DELETE operations.

Comment Moderation	Manage approved, pending and spam comments.
--------------------	---

Objectives

Build a secure modular backend.
Support AI generation and summarization.
Implement JWT authentication and role-based authorization.
Use MongoDB and Mongoose for validated storage.
Provide scalable REST services.
Use validation, sanitization, rate limiting and logging.
