

Define Problem Statements

Date	30 September 2026
Team ID	SWTID-2026-8550
Project Name	AI BlogNest API

2. Define Problem Statements

Primary Problem Statement

Content creators need a centralized and secure system to create, organize, manage and publish blog content while receiving AI assistance for generation and summarization. Manual handling of drafts, categories, tags, approvals, comments and media can be time-consuming and difficult to control.

Detailed Problems

Difficulty managing multiple drafts, categories and tags.

Limited visibility into content engagement.

Time-consuming approval and comment moderation.

No streamlined handling of media paths and metadata.

Need for different permissions.

Need for AI-assisted generation and summarization.

Risk of unauthorized protected operations.

Need for validation and sanitization.

Case Study

The documented scenario describes Priya, a content creator managing multiple blogs. The proposed BlogNest backend centralizes workflow controls, content scheduling, category taxonomy, media registration and granular user roles.

Area	Challenge	Required Capability
Content	Draft organization	Blog lifecycle management
Discovery	Category/tag handling	Categorization/search
Approval	Publishing control	RBAC workflow
Comments	Moderation effort	Protected endpoints
Writing	Manual effort	AI generation
Long content	Manual summary	AI summarization

Security	Unauthorized actions	JWT + RBAC + validation
