

Project Planning

Date	30 September 2026
Team ID	SWTID-2026-8550
Project Title	AI BlogNest API

Project Planning

Goal

Develop a modular secure REST API combining blog content management with AI-assisted generation and summarization.

Phase	Activities	Output
Ideation	Problem study, brainstorming, objectives	Project concept
Requirements	Functional/non-functional and technology requirements	Requirement specification
Design	Architecture, ER/data model, MVC, API flow	Design
Development	Server, routes, controllers, models, database	Working backend
AI Integration	Generation and summarization	AI services
Security	JWT, RBAC, bcrypt, validation	Protected API
Testing	Registration, login, blogs and AI APIs	Test evidence
Documentation	Technical/project documentation	Final package

Task Allocation

Area	Responsibility
Backend/API	Server, routes, controllers, services
Database	MongoDB, Mongoose and schemas
Security	JWT, RBAC, bcrypt and validation
AI	Gemini generation and summarization
Testing	Postman/ThunderClient
Documentation	Requirements, diagrams and reports

Schedule

Week	Planned Work
1	Problem study and requirements
2	Architecture and data model
3	Backend and database
4	Authentication and security
5	AI integration
6	Testing, fixes and documentation
